

Future Dublin

Everyone knows the weather forecast can be unreliable. So we thought of a weather Frisbee. To use it you throw it vertically upwards as hard as you can into outer space. When it comes down it tells you the weather for this day and the next.

Cars may pollute the earth and the plants. We thought of an *electrifying* idea to help Dublin. We thought of teleportation. Teleportation will help Dublin stop polluting the Earth. Teleports look like lifts that contain a keypad into which you type your destination. Then, whoosh, off you go.

Rubbish may bring a *stink* to Dublin city. So we thought of a brilliant way to make Dublin a litter-free place. If people had pet litter-bugs that eat your rubbish, there would be no litter on our streets. The litter-powered litter-bug would follow you everywhere and eat any litter that you drop.

In the future I think Dublin will have a hotel for the homeless. Homeless people can go and stay in the hotel for free. To build it communities will organise a festival to raise money for the hotel for the homeless

Children and parents alike both know school bags can be heavy, so we thought about this problem hard. We think we came up with something, a school bag that might have a lot of books in it but weighs nothing. We would call it 'the anti-gravity bag' so children won't be walking to school with big heavy bags on their backs.

4th class

Griffith Barracks M.D.N.S.,

South Circular Rd.,

Dublin 8
